LLM

Chain of Thought

<think>
I will provide a complete solution for implementing the **KernelName** activation function.
****1. Task Analysis****
****2. Tiling Strategy Design****
****3. Computational Flow Design****
****4. Key Implementation Points****
……
</think>
<kernel_impl>
__aicore__ inline void CopyIn()/ Compute()/ CopyOut() ……
</kernel_impl>

Generated Code

Automated Evaluation Pipeline

Compilation

Correctness & Performance

Criteria

```
class Model(nn.Module):
    def __init__(self):
        super(Model, self).__init__()
    def forward(self, input)
        return some calculation…

class ModelNew(nn.Module):
    def __init__(self):
        super(ModelNew, self).__init__()
    def forward(self, input)
        return
kernel_gen_ops.kernel_name(input)
```

Difference < Abs_error

Execution Latency Vs.
